Minutes of Meeting	1. Secretariat – prepares minutes 2. Attendees/Concerned Offices – receives
Notice	1. Originating Office – issues 2. Concerned Parties – receives

Notes for automation design

- **Endorsement, Referral, Letter (Internal), Request, Certification** don't have one fixed path in practice — the next office is chosen per-instance by the sender. Consider a manual-select step or an auto-suggest based on the last N routings for that document type, rather than a hardcoded chain.
- **Confidential** is an access-control flag more than a workflow type — it should skip the normal routing engine entirely.
- **Executive Order** and **Memorandum Circular** both need a broadcast mode (distributed to all offices) alongside the normal sequential routing.
- **Disbursement Voucher** revisits Treasury twice (steps 4 and 9) and touches 5 offices at the BAC step alone — the workflow engine needs to support repeat visits to the same office and multi-office committee steps, not just a linear one-pass chain.
- This routing is based on your provided office list and document types as of this conversation — confirm each path with your client/adviser before finalizing the automation logic, since some offices in the list overlap functionally (e.g. two City Social Welfare And Development Officer entries).
