

Document Tracking System: Testing Checklist

Please try each step below and tick the box when you are done.

Before you start

You will need:

- A computer with Google Chrome or Microsoft Edge.
- The web address of the system. We sent this to you separately.
- About one hour. You can stop and continue another day.
- This printout and a pen.

You cannot break anything. Everything in this system right now is made-up practice information. It is not real city paperwork. Click anything you like.

Web address: _____

Your practice log-ins

We made five practice accounts. Each one is a different kind of user. **The password for all five is the word: password**

Type this to log in	Who this pretends to be	Office
clerk@cicto.test	Staff member	Office of the City Mayor
admin@cicto.test	Office head	Office of the City Mayor
mto@cicto.test	Office head	Office of the City Treasurer
sb@cicto.test	Office head	Office of the Sangguniang Panlungsod
super@cicto.test	System manager	All offices

Please note. These five log-ins are for practice only, and the password is very easy to guess on purpose. Before the system is used for real, we will delete all five and make a proper account for each of your staff, with their own private password.

In the system, "Office head" is written as **Admin**, and "System manager" is written as **Super Admin**.

Part 1. Logging in

Start here. This should take about five minutes.

- ☐ Open Chrome and go to the web address at the top of this sheet.
- ☐ Type **clerk@cicto.test** in the Email box.
- ☐ Type **password** in the Password box. Click **Login**.

You should now be on the Home page.

- ☐ Click **Logout** at the top right.
- ☐ Log in again, but this time type the password wrongly on purpose.

You should see a red message telling you the details are wrong. The screen should not go blank or show anything confusing.

Anything wrong? Write it here:

Part 2. Adding a new document

Log in as **clerk@cicto.test**.

- ☐ Click **Track Documents** at the top.
- ☐ Click the **Submit Document** button.
- ☐ Fill in the Title, Document Type, Department and Priority.
- ☐ Do *not* attach a file yet. Click **Submit**.

It should refuse, and tell you a file is needed.

- ☐ Now attach any file from your computer. A PDF or a photo will do.
- ☐ Click **Submit** again.

You should see a green message with a new number, something like OCM-2026-00007. Write that number down, you will need it later.

The number you got: _____

A question for you. Right now the system always asks for a file. Is that what you want? Sometimes only paper arrives at the counter and nothing has been scanned yet. If you want to allow that, tell us and we will change it.

Anything wrong? Write it here:

Part 3. Finding a document

- ☐ Click **Track Documents**.
- ☐ Type the number you wrote down into the search box. Click **Search**.
- ☐ Try it again, but type it in small letters this time.
 - It should find the document both times. Big or small letters should not matter.
- ☐ Use the **Status** drop-down to show only some documents.
- ☐ Click **View** on any document.
 - You should see which office has the document now, how long it has been there, and every office it has passed through.
- ☐ While looking at a document, click **Show QR** or **Print label**.
 - A QR square should appear with the document number printed under it. Please check it looks clear enough to stick on a folder.

Anything wrong? Write it here:

Part 4. Moving a document along

This is the most important part. Log out, then log in as **admin@cicto.test**.

- ☐ Open the document you made in Part 2.
- ☐ Click **Received**, then click **Confirm**.
- ☐ Click **Approved**, then click **Confirm**.
- ☐ Click **Completed**, then click **Confirm**.
 - After each click you should see a green message, and the bar at the top of the page should move forward one step. At the bottom you should see a list of who did what, and when.

Sending it to another office

- ☐ Open a different document.
- ☐ Click **Send to Another Office**.
- ☐ Choose **Office of the City Treasurer**, type a short remark, and confirm. The list offers 51 offices. Only two of them have a practice account, and this is one — so please pick this one, or the next step will show you nothing.
- ☐ Log out. Log in as **mto@cicto.test**.
 - The Office of the City Treasurer should now see that document in their list.

Anything wrong? Write it here:

Part 5. Offices should not see each other's papers

This is the most important safety rule in the system. One office must never see another office's documents.

☐ Log in as **admin@cicto.test** (Office of the City Mayor).

☐ Search for **SP-2026-00001**.

Nothing should come up. That document belongs to the Office of the Sangguniang Panlungsod.

☐ Log out. Log in as **sb@cicto.test**.

☐ Look at their Track Documents list.

They should see only one document, their own. Nothing from the Office of the City Mayor should appear.

If you can see another office's documents, please tell us straight away. That would be a serious problem and we would fix it first.

Anything wrong? Write it here:

Part 6. The office head's own page

Log in as **admin@cicto.test**.

☐ On the left, click **Document Management**.

☐ Look at the four boxes at the top. **Are the numbers right?**

☐ Click **Users**. You should see only your own office's staff.

☐ Click **Reports**. You should see a chart and a waiting list.

☐ Click **Settings**. Change the Date Format and click **Save Changes**.

☐ Press F5 to reload the page.

Your date setting should still be there after reloading.

Anything wrong? Write it here:

Part 7. Reports you can print

- ☐ Click **Reports** in the menu at the top.
- ☐ Look at the four boxes and the charts.
- ☐ Click **Download PDF**. Open the file that downloads.
- ☐ Click **Export Excel**. Open that file too.

Both files should open properly and the numbers inside should be correct.

Please look at these carefully. These are the reports you will be handing to your superiors. If a column is missing, or you need different information, now is the best time to tell us. It is much harder to change later.

What is missing from the reports?

Part 8. The system manager's page

Log in as **super@cicto.test**.

- ☐ On the left, click **Manage Users**.
- ☐ Click **Add New Admin**.
- ☐ Fill in a name, a new email address, choose the role and office, and make up a long password.
- ☐ Click **Create account**.
- ☐ Log out, then try logging in with the account you just made.

The new account should appear in the list and should be able to log in.

Now try setting a password for somebody — this is the part that replaces "Forgot Password", so it is worth testing properly.

- ☐ Log back in as **super@cicto.test** and go to **Manage Users**.
- ☐ Find the account you just made and click **Set password** on its row.
- ☐ Read what the panel says will happen. Type *your own* password in the box that asks for it, then a new password for them, twice.
- ☐ Click **Set password**.
- ☐ Log out and log in as that account using the *new* password.
- ☐ Log out again and try the *old* password.

The new password works. The old one does not. The message at the top reminds you to give them the password yourself, because nothing is emailed.

- ☐ Log back in as **super@cicto.test** and return to **Manage Users**.
- ☐ Look at your own row in the list.

There is no **Set password** button on your own row. That is on purpose — you change your own password under Settings, where it asks for your current one first.

- ☐ Still as **super@cicto.test**, click **All Documents**.
- ☐ Check that you can see documents from every office here.
- ☐ Click **Reports & Analytics** to see the charts.
- ☐ Click **System Settings**, then scroll down to the **Security log**.

The security log should show your own log-in from earlier, the new account you just made, and the password you set for it — that last line names you, the account it was for, and how many devices were signed out. Every password an administrator sets is recorded this way.

Why is there no Delete button? This is on purpose. Once a document is in the system it should never be wiped out, because its whole history would go with it, and keeping that history is the main reason for having this system at all. Instead there is **Archive**, which puts a document away but keeps the record, and you can bring it back any time.

Anything wrong? Write it here:

Part 9. On your phone

Many of your staff will use this on a phone. Open the same web address in your phone's browser and log in.

- ☐ Open Track Documents.
- ☐ Open a document.
- ☐ Open Submit Document.

Everything should fit on the screen. You should never have to slide the page sideways to read something.

Anything wrong? Write it here:

Things that do not work yet

So you do not waste time on them, here is what we already know is not finished. These are waiting on information from your side. Please do not report these.

1. The system does not send email

You told us on 20 August that CICTO cannot give out email settings for this system. That is a fine answer and nothing is waiting on it any more — we have built the alternative you asked for instead. What it means day to day:

- **"Forgot Password" tells people to ask you.** The page no longer asks for an email address, because no email can be sent. It says plainly that the server cannot send email and that an administrator will set a new password.
- **You set the new password yourself, from the system.** Go to *Manage Users*, find the person, and press **Set password**. You will be asked for your own password first, then theirs twice. Tell them the new password in person or over the phone — the system never emails it to anybody. Please test this one; it is new.
- **Help messages are saved but not sent.** If someone uses the Submit a Ticket page, the message is kept inside the system. Nobody gets an email about it. The page says so when you use it.
- **Nobody is emailed** when a new document arrives at their office. The bell inside the system still tells them.

If the city ever does set up an email account for this system, tell us and we will connect it. Nothing here has to be undone first.

1a. Two things to know before you set someone's password

- **They get signed out everywhere.** If they are signed in on a phone and a desk computer, both stop working straight away. Warn them, or they will ring you about it.

- **There is a tick box for a stolen account.** If somebody has simply forgotten their password, leave it alone. Tick it only if you think another person has got into their account, or if they have lost the phone they use for their security codes. It removes those extra security methods so they can set them up again from scratch.

2. Scanning with a phone camera

Phone cameras will only scan when the website address is the secure kind (the one with a padlock next to it). That is a rule made by the internet browsers themselves, not something we can switch on. Once the system is installed properly on the city's own address, it will work.

A plug-in barcode scanner works now, and so does typing the number by hand.

3. Office hours on the Contact page — now corrected

This one is settled. The Contact page now says **Monday to Thursday, 7:00 AM to 6:00 PM**, which is what you confirmed on 18 August 2026. There is nothing left for you to decide here.

It used to say 8:00 AM to 5:00 PM, copied exactly from the design you gave us, and we had guessed that the Thursday was a slip of the pen for Friday. It was not. The four-day week is real; only the times were wrong. Please still open the Contact page and check that it reads that way, so we know the screen matches the answer you sent.

What we need from you

Here is where each of these stands as of 18 August 2026. Thank you for the lists you sent: two of the seven are now closed, and one has turned into a setting you control yourselves. The rest are marked below. A written reply is still best, so we both have something to look back on.

What we asked for	Where it stands
Your real list of offices, and the short code for each one	Received 18 August 2026. All 53 offices and their codes are in the system now. The code is what starts every document number, like the OCM in OCM-2026-00007. Three things we had to decide for you, so please check them and say if any is wrong: • The City Social Welfare and Development Officer is on your list twice, once as CSWDO and once as CSWD. We put both in so neither code can be given away to another office, but CSWD is switched off until you tell us it is really in use. • "CEEAO / BIPU" is in the system as CEEAO. A slash cannot go into a document number: that number is printed on paper and used in web addresses. • Office names are shown in ordinary capitalisation, like "Office of the City Mayor", rather than the capitalisation used in the file you sent.
Your real list of document types	Received 18 August 2026. The 43 types you sent have replaced the practice ones.
How many days each type should take	Still needed. You told us this is for the City Archive and Records Office to answer, and that you would ask them. Until they do, every document

What we asked for	Where it stands
	is given the same deadline of three days, whatever kind of document it is. The "due soon" and "overdue" markers do work, but the dates behind them are a stand-in, not your real rules. Nothing else has to change once the real numbers arrive.
Your email settings	Answered, and nothing further is needed. You said CICTO cannot give out email settings, and asked us to build a way for an administrator to set someone's password instead. That is built and is on the Manage Users page. See the section above.
How long old files should be kept	Answered, with one figure still to come. You said three to five years at the least, and that older records are kept on your cloud server as well. We have set the system to the lower end of that, three years, and we will move it when the City Archive and Records Office gives you the exact figure. Nothing is deleted automatically in the meantime: the clearing-out job is switched off, and it stays off until you confirm in writing that you want it running.
Where the system will be installed	Answered: a cloud server. Three things about that server are still missing. The web address it will use, so we can put the padlock (HTTPS) on it, which is also what phone-camera scanning is waiting for. Whether it can run jobs on a timer, which the nightly backup and the overdue check both need. And where the off-site copy of the backup is kept, because a backup sitting on the same machine as the system is not a backup.
Can an office head approve their own document?	Nothing to send us: this one is now yours to set. It is a switch on the System Settings screen. Today it blocks an office head from approving a document they submitted themselves, and a Super Admin can turn it on at any time without asking us.

If something goes wrong, tell us this

The more of these you can tell us, the faster we can fix it. Even two or three is a big help.

- ☐ **Which page were you on?** For example, "the Submit Document page".
- ☐ **Which log-in were you using?** For example, "admin@cicto.test".
- ☐ **What did you click, in order?**
- ☐ **What did you expect, and what happened instead?**

A picture of the screen helps a lot. On a computer, hold down the Windows key and Shift and press S. On a phone, just take a normal screenshot.

An example

"On the Submit Document page, logged in as clerk@cicto.test. I filled in everything and attached a PDF, then clicked Submit. I expected to get a document number, but the screen just went white and nothing happened. Picture attached."

Send your notes to us the same way we normally talk. If you found several things, one list is easier for everyone than lots of separate messages.

Thank you for doing this. The time you spend now is what makes sure the system is right before it touches real city paperwork. Anything you notice today is something your staff will not have to put up with every day.
